

Mindfulness Activities

Box Breathing

Preparation

To get ready to lead this practice, teachers should consider practicing box breathing for weeks. It is an easy discipline to adopt. In fact, noticing boxes or rectangular shapes in daily life can serve as a reminder to pause for a few deep diaphragmatic breaths. For example, while driving to work and stopping at a red light, the windshield's shape can serve as a reminder to take a deep breath.

When implementing this activity in class, teachers need only allot three to five minutes. No materials are required, but teachers might choose to draw or display a box shape on the board to help visualize the directions.

Essential Learnings

In order to help students understand the purpose of box breathing and get the most benefit from the activity, teachers should directly teach the following points.

- Focused breathing reduces stress and instill a sense of calm.
- Doing breathing exercise once a day helps people learn how to breathe from their diaphragm.
- Students can use this activity whenever they feel anxious or stressed.

Directions

Teachers can guide students through box breathing using the following six steps.

1. Instruct students to sit comfortably in a chair or on the floor.
2. Begin by telling students to look at or imagine the box shape and exhale completely. Start at the lower left corner of the box and prompt students to inhale for five seconds as you move up the left side of the box.

3. As you move along the top of the box, hold for five seconds.
4. As you move down the right side, exhale for five seconds.
5. As you move along the bottom of the box, hold for five seconds.
6. When you arrive back at the beginning, repeat.

Teachers can either count out loud or use a pointer to silently indicate the pace, which they can modify as appropriate for students. For example, elementary school students might need to do box breathing in interval of three seconds due to their smaller lungs.

Glitter Jars

Preparation

This activity can take twenty to forty minutes. If this activity is done as a demonstration, a teacher will need one canning jar, baby food jar, or other glass or clear plastic jar with a watertight lid. If students are to make their own glitter jars, each student or small group of students will need a jar. Various colors of glitter can represent different thoughts and feelings. Each jar will also need to be filled with water, so teachers should make water available to students.

Essential Learnings

- Teachers can use the following key points to explain the snow globe metaphor and provide context for this activity.
- The mind is similar to snow globe. At times, it is settled and calm. Other times, it is filled with flurries. People have tools to help them calm the flurries.
- The jar is similar to a person's mind. Each color of glitter represents a thought or feeling that person has.
- People do not need their thoughts and feelings to go away. They just need thoughts to settle down so they can see clearly.

Directions

Teachers can follow these nine steps to create glitter jars with students.

1. Fill the jar with water. Ask students to name some thoughts that seem to swirl around in their minds. Some examples may include worrying about grades, dealing with friendship issues, missing a free throw in a basketball game, obtaining troubling information from the news or media, and so on.
2. Add some glitter of one color to represent one thought – for example, “Blue represents when we worry about who we will sit with at lunch.” Swirl it slightly.
3. Add another color to represent another thought or feeling, such as, “Green represents what is going on in the media.” Swirl it slightly.
4. Continue the process with three or four colors.
5. Seal the jar by fastening the lid tightly.
6. Show the students that at times the thoughts and feelings are very calm, such as when they first get up in the morning. All of the glitter will be at the bottom of the jar during this explanation.

7. Begin to shake the jar while describing events that might cause their thoughts to grow louder throughout the day. For example, perhaps the student was late for school and dropped some books on the way to class. Maybe someone wrote something mean on the student's locker, or a new friend smiled at the student. Ask students to notice how the glitter starts swirling as these thoughts compound.
8. Invite students to discuss how to make the water clear again. Their answers may include stillness, silence, deep breathing, meditation and so on.
9. Share the essential learnings with the students: We do not want our thoughts and feelings to go away. We just want them to settle down so we can see clearly.

Thirty-Second Stretch Break

When short on time, a thirty-second stretch break helps students focus for upcoming learning. Teachers can use it several times a day if needed.

Preparation

This is an activity that teachers can use as needed throughout the day. As energy levels lag, teachers can invite students to participate in a stretch break. Once the class is familiar with the process, various students can lead the stretch break.

Essential Learnings

Note the importance and usefulness of stretch breaks.

- Our brains need oxygen to learn effectively. Oxygen is fuel to our brains.
- A simple stretch break increases our oxygen levels. This helps us focus and stay alert for learning.
- Sometimes learning or creative ideas occur while we are moving.

Directions

Consider the following seven steps.

1. Instruct students to stand up and shake their arms out.
2. Have students stretch their arms up high toward the sky. Let them know it's okay to make stretching noises, such as "mmm" or "ahh."
3. Ask students to lower their arms back to their sides.
4. Tell students to tilt their heads gently to the left, roll their heads gently to the front, and then over to the right and back to the center. Repeat in the opposite direction.
5. Have students roll their shoulders to the back four times.
6. Have students roll their shoulders forward four times.
7. Finally, ask them to shake their arms out one last time and be seated.

Body Scans

Preparation

This activity is very easy to prepare for: it requires no materials, although teachers will want to plan how they will lead students through the body scan. It typically takes about ten minutes to complete this activity.

Essential Learnings

Students should understand the following key aspects of a body scan.

- Taking time to be aware of the body allows people to notice stressed or tense muscles and relax them.
- Body scans help practice general focus and awareness, which can be applied to sensations in the body, thoughts in the mind, or external events.
- After learning body scan techniques, students can use them at any time.

Directions

Body scans can be conducted in any order. The following eleven steps progress from the feet up to the head.

1. Ask students to lie comfortably on the floor or to sit up straight in their chairs. If seated, students should aim for the middle ground between being rigid and being relaxed. Ask them to rest their palms gently on the floor beside them or on their laps face up.
2. Invite students to take three or four slow belly breaths in and out.
3. Ask them to bring attention to their right foot. Have them notice the toes, the arch, and the heel touching the floor. Ask them to gently bring that awareness up to the calf and the thigh. Have them notice the feeling of the calf. Have them notice the pressure of the thigh against the floor or chair. Repeat with the left foot and leg.
4. Remind them to breathe in and out, slowly and gently, allowing their abdomen to rise and fall. Ask them to notice their torso, feeling their back against the carpet or chair, feeling the gentle rise and fall of their stomach.
5. Bring their attention to their ribcage. Ask them to feel their lungs expand and contract with each breath, in and out, in and out.
6. Invite them to notice the heart and how it beats on its own, without any conscious effort.
7. Invite them to move their attention to their right fingers and palms, their wrists, their arms, elbows, and shoulders. Repeat with the left arm.
8. Ask students to bring their awareness to their neck muscles. Invite them to relax their neck muscles. Ask them to notice their jaw muscles. Are they tight? Can they relax?
9. Invite them to notice their mouths, noses, eyes, and foreheads and relax the muscles of the face.
10. Ask them to notice their bodies as a whole. Invite them to outline their bodies in their minds starting at the crown of their head and imagining the outline traveling the course of the arm, down the right side, all the way around and up the left side, and resting again at the crown of the head.

11. Ask them to breathe deeply a few times. When they are ready, ask them to rejoin the class and calmly return to their seats.

Eating a Raisin

Preparation

To conduct this ten-minute activity, each student needs to have one raisin. We suggest explaining the activity to students before passing out the raisins to ensure that they do not eat them before the activity has begun. Teachers should also be sure to accommodate any students with food allergies or dietary restrictions, and should substitute an acceptable and appropriate kind of food.

Essential Learnings

Teachers can help students appreciate the purpose of Eating a Raisin through the following information.

- People often do things without paying much attention to them.
- Doing familiar activities slowly and deliberately allows one to see them from a new perspective.
- Many areas of life can benefit from the focus and attention practiced in this activity.

Directions

The five steps of Eating a Raisin typically proceed as follows.

1. Students should hold the raisin in their hand and just look at it, as if they are seeing a raisin for the first time. Ask them to pretend they are a one-year-old, looking at and wondering what this wrinkled little item is all about. If their minds wander while doing this activity, ask students to gently return their attention to the activity.
2. Ask them to feel the raisin and rub it between their fingers. If students feel comfortable, ask them to close their eyes to limit the sensation to only that of touch.
3. Then ask them to place the raisin in their mouth without chewing it. Ask them to notice how it feels. Again, if they are comfortable, ask them to close their eyes for the experience.
4. Ask students to slowly chew their raisins. What does it taste like? Smell like? Feel like? Ask them not to rush into swallowing it. Finally, ask them to swallow it.
5. Lead the class in a discussion of what it's like not to rush through experiences. Where else might they be able to slow down and experience events with such attention?

Mindful Walking

Preparation

Mindful walking takes very little time to do and requires no materials. In addition to using this activity in a defined manner with a whole class, teachers can also remind students to walk mindfully at any time in the classroom, in the hallway or other areas of the school, and at recess.

Essential Learnings

Students should understand and consider the following ideas as part of mindful walking.

- People have control over their bodies.
- People have full control of their movement and actions.
- Students can honor others' personal space by walking mindfully, with intention, and by noticing what they are doing.

Directions

A session of mindful walking typically uses the following eight-step process.

1. Calmly ask or gesture to students to rise from their seats.
2. Ask them to begin walking around the room and to be conscious of every step.
3. Remind them to notice what they are doing with each step.
4. Provide cue words such as to walk *calmly*, *carefully*, *gently*, and *thoughtfully*.
5. Ask them to watch each step they take.
6. Ask them to pause, take only one step, and freeze. Repeat this several times.
7. You may want to include phrases such as, "You are leaving footprints of kindness wherever you go," "We want to be respectful and mindful of other people's space," and "Be mindful; be gentle."
8. Ask students to gently, mindfully return to their seats. Ask them to mindfully pull out their chairs and be seated.

Mindful Movements

Use balancing activities to improve focus. Have young people balance on one leg, or leg stretched out.

More advanced have them balance something on their head like a bean bag while they stand on one leg.

Group activity

Divide the group into four teams. Each team gets a spoon, a cup of water, and an empty cup. The object is to fill the spoon with water, walk it from one point in the room to another, and dump the water in the empty cup.

Explain that this activity is a bit like a relay race, but speed is not important. Mindful balance is. Introduce the terms *balance*, *steady*, and *stable*. Tell youth that each member of the team will get a chance to walk with the spoonful from the beginning point to the end point. If each team does not have an even number of youth, choose a youth who will go twice.

Discuss: Which group has transferred the most water into the empty cup? What was your best strategy for holding the spoon steady? How did you keep it stable in your hand? What did you learn about mindful balance from this activity?
